ENTERPRISE RESOURCE PLANNING

Establish the right ERP environment for your business needs—confidently, collaboratively, and cost-effectively.

We help growing and transforming enterprises achieve their business goals through efficient and informed application of ERP technology.

Better information, better business

Companies with aggressive growth or transformation strategies often face a common constraint: enterprise resource planning (ERP) applications that don't adequately support their current operations nor their strategic goals.

- Is your organization running on spreadsheets or multiple ERP applications?
- Is it difficult to obtain a cross-enterprise view of performance or to integrate data among many ancillary applications?
- Does your organization require manual tasks to manage critical processes?
- Does inaccurate or incomplete information cause customer service issues?
- Are executive requests taking you days (not hours) to answer?
- Is your ERP version currently unsupported by the vendor causing stress around the "what if?"

GROUNDED IN YOUR BUSINESS GOALS

WE APPROACH ERP (OR ANY SOFTWARE SOLUTION) BY STARTING WITH YOUR BUSINESS REQUIREMENTS AND GOALS. WE WORK WITH YOUR VARIOUS STAKEHOLDERS TO:

ASSESS
the effectiveness of your current applications portfolio against your business requirements

DESIGN
a practical applications strategy and roadmap based on your business goals and needs

SELECT
the best and most cost-effective solution(s) for your business, using a structured, vendor-agnostic approach

IMPLEMENT
the solution based on a realistic plan and established capabilities for managing and resolving the risks and issues of these complex projects

OPTIMIZE
your current operating environment through the lenses of people, process, and technology

Experience and best practices

Our ERP team helps you establish the right enterprise applications and environment for your business needs and goals - whether those applications are on-premises, in the cloud or a hybrid.

With proven approaches rooted in our 16+ years as a firm and extensive knowledge of the ERP landscape gained through years of platform strategy, software selection, and implementation projects, we understand the ERP best practices that allow you to make informed business decisions - and reduce software and implementation costs to add value to the organization.

Right for your business

The right ERP environment produces a host of business benefits—from better company-wide operating and performance data to greater collaboration among business functions to lower IT support costs.

Getting to that "right" environment can be complex and costly. We help you navigate that complexity—confidently, collaboratively, and cost-effectively.
